# Workbook:

## Best-First Search

## Greedy Search (tree search)

Albert Sanchis  
Jorge Civera

*DSIC*

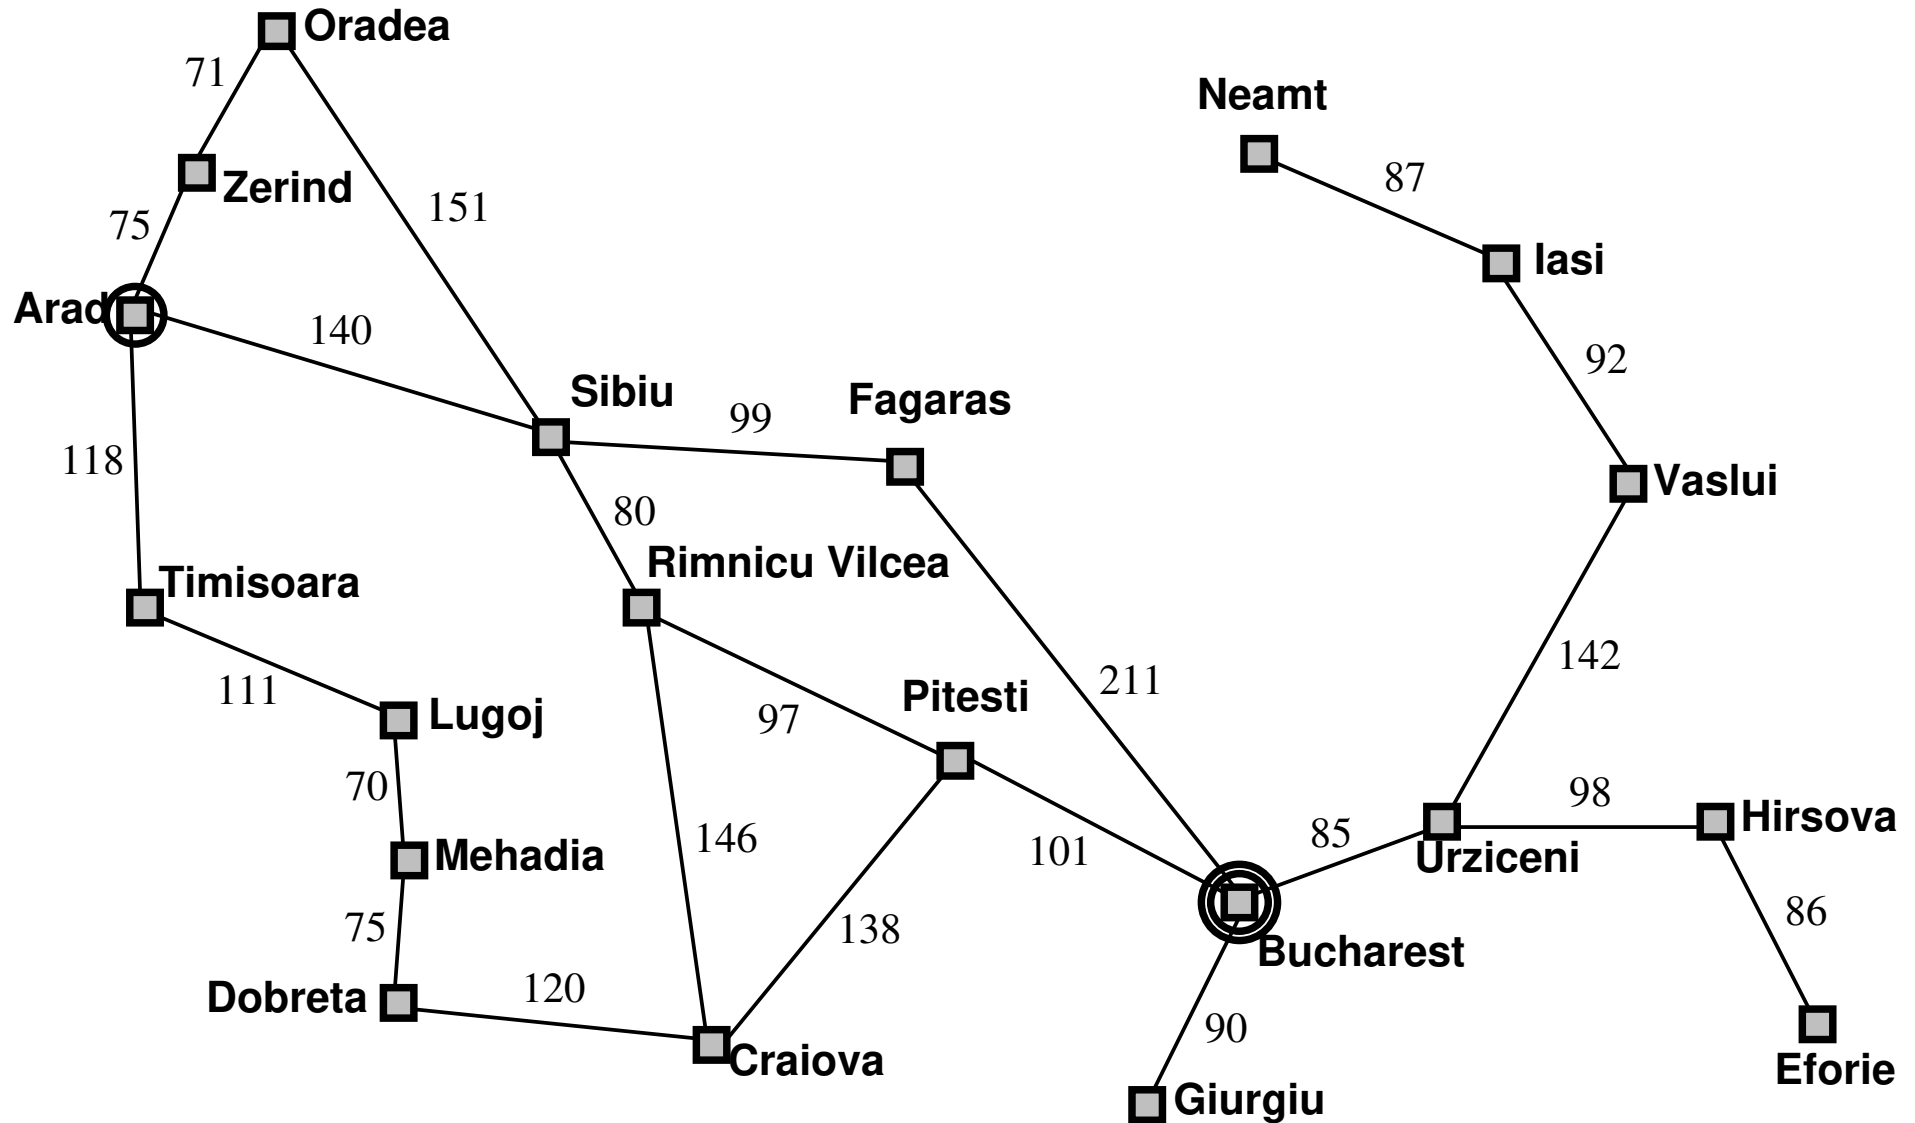

Departament de Sistemes  
Informàtics i Computació

# Learning objectives

- ▶ To describe greedy search (tree search).
- ▶ To draw the tree of greedy search (tree search).
- ▶ To apply greedy search (tree search) to a well-known problem.
- ▶ To analyze the quality of greedy search (tree search).

# Problem: Shortest path between two points

Shortest path from Arad to Bucarest [1]:

$\text{Actions}(\text{Arad}) = \{\text{Move}(\text{Sibiu}), \text{Move}(\text{Timisoara}), \text{Move}(\text{Zerind})\}.$

# Problem: Shortest path between two points

Straight-line distances to Bucharest:

	Bucharest		Bucharest
Arad	366	Mehadia	241
Bucharest	0	Neamt	234
Craiova	160	Oradea	380
Drobeta	242	Pitesti	100
Eforie	161	Rimnicu	193
Fagaras	176	Sibiu	253
Giurgiu	77	Timisoara	329
Hirsova	151	Urziceni	80
Iasi	226	Vaslui	199
Lugoj	244	Zerind	374

# 1 Best-first algorithm (tree search) [2]

```
BF( $G, s', h$ )           //  $G$  weighed graph,  $s'$ ,  $f$  evaluation function  
   $O = \text{InitQueue}(s', f(s'))$            // Open: priority queue  $f$   
  while not  $\text{EmptyQueue}(O)$ :           // best-first:  $s = \arg \min_{n \in O} f_n$   
     $s = \text{Pop}(O)$                        // draws in favour of goal state  
    if  $\text{Goal}(s)$  return  $s$                // solution found!  
    for all  $(s, n) \in \text{Adjacents}(G, s)$ : // generation:  $n$  is child of  $s$   
       $x = f(n)$                            // possibly new  $f_n$   
      if  $n \notin O$ :  $\text{Push}(O, n, f_n \triangleq x)$   
      else if  $n \in O$  and  $x < f_n$ :  $\text{Update}(O, n, f_n \triangleq x)$   
  return NULL                       // solution not found
```

- ▶ **Question 1:** Write a trace of the **BF** algorithm (tree search) applied to the problem of finding the shortest path from Arad to Bucarest.
- ▶ **Question 2:** Draw the search tree as a result of applying the **BF** algorithm (tree search) to the problem of finding the shortest path from Arad to Bucarest.
- ▶ **Question 3:** Does the BF algorithm (tree search) find a solution?
- ▶ **Question 4:** If the answer is “Yes”:
  - ▷ What is the solution found?
  - ▷ What is the cost of this solution?
  - ▷ Is this the solution of minimum cost?
